

Four benchmarks are resolution-consistent; VISam remains earlier

Temporal sampling and bootstrap uncertainty are different tests of agreement.

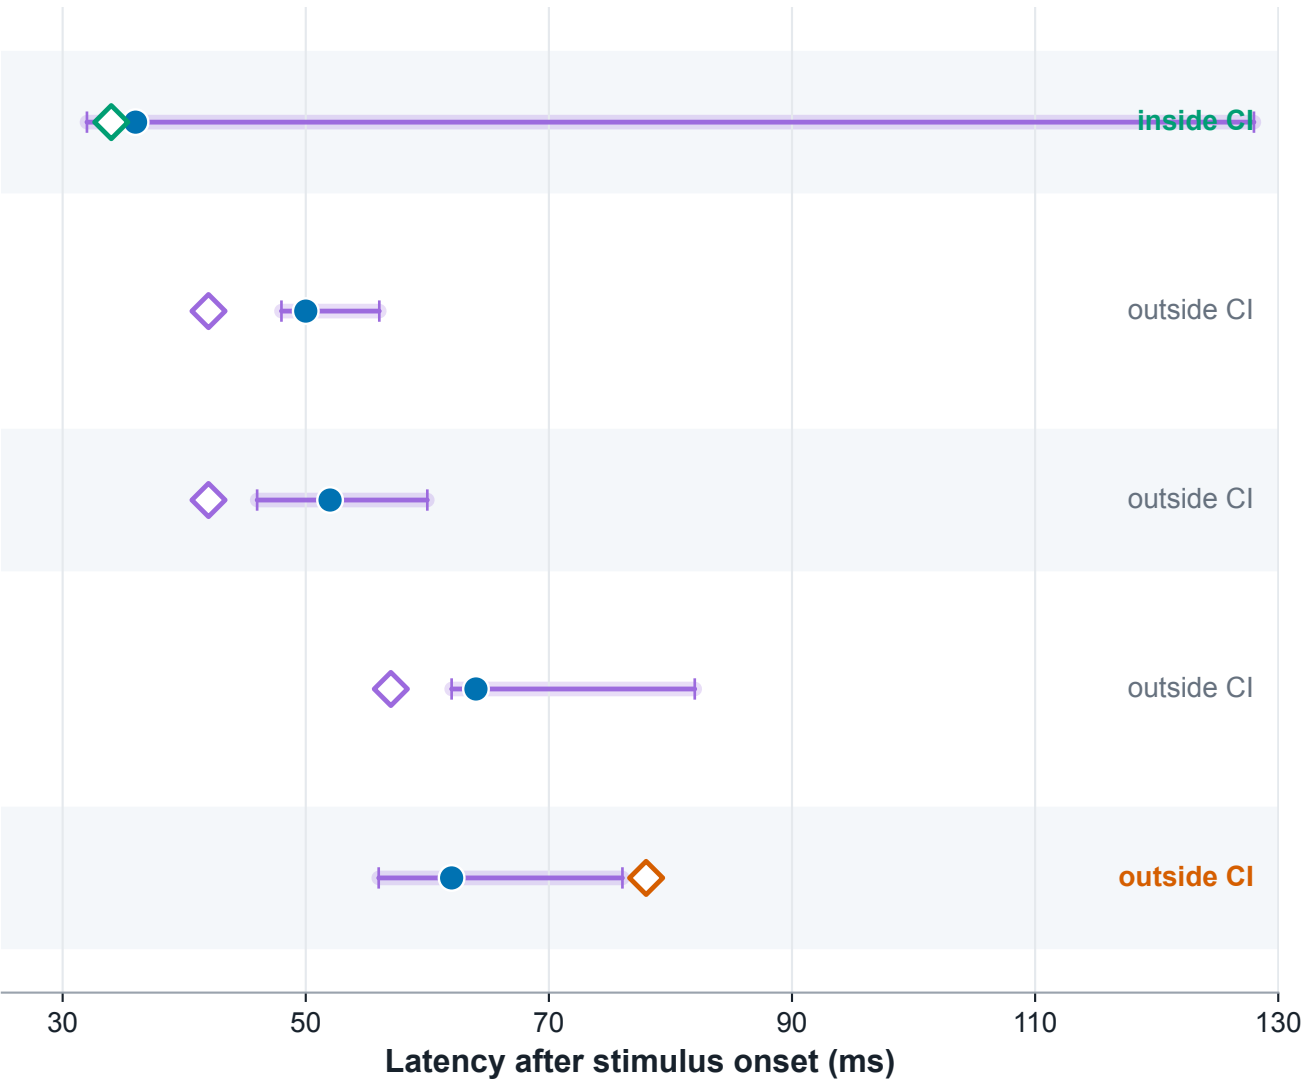

A Temporal sampling agreement

Blue band: unresolved 10-ms crossing interval · filled circle: notebook · open diamond: paper

B Stability across recording insertions

Purple line: 95% insertion-level bootstrap CI · filled circle: notebook · open diamond: paper

4 / 5

within ≤ 5 ms of the 10-ms bracket

1 / 5

paper values inside the 95% insertion CI

VISam

13 ms beyond bracket; ~2 ms above CI
